Abstract: *This article describes the problem of poverty, its true essence, the positive work being done to reduce poverty, and directions for reducing the problem of poverty.*

Key words: *population, social policy, social protection, poverty, property, entrepreneurship.*

In recent years, large-scale reforms have been implemented in our republic under the leadership of President Sh.M.Mirziyoyev based on the principle of "attention to people". Increasing the well-being of the population, especially in rural areas, increasing the real income of the population, and providing financial support to the underprivileged population in need of social protection are the constant focus of the state policy.

As a result of the necessary measures taken in order to support families in need of social protection and low-income families, to involve the population in entrepreneurship effectively, a number of positive activities are being carried out in our Republic. A number of needy families are being helped.

First of all, what is poverty and what is meant by poverty reduction? Poverty alleviation means the implementation of a comprehensive economic and social policy to awaken the spirit of entrepreneurship in the population, to fully realize the inner strength and potential of a person, and to create new jobs.

Our country has great opportunities to reduce poverty, and many positive things are being done. In particular, a number of positive works can be seen in Namangan region. Based on the possibilities of the regions, the expansion of the livestock breeding sectors of poultry, beekeeping, sheep, goat, rabbit, camel breeding, the establishment of greenhouses with the efficient use of every inch of land, and the development of farms, as well as apricots, cherries, peaches, apples and other crops grown in our region. the export of yellow sweet fruits to foreign countries such as Russia, UAE, Afghanistan, Kazakhstan, Kyrgyzstan, Tajikistan is the result of the measures being taken to eliminate poverty.

So, what are the main directions of poverty reduction, what are the scientific and practical foundations of poverty reduction?

- First of all, to increase the financial and entrepreneurial literacy of the population, to further expand their economic knowledge and skills, to attract the population to small business and entrepreneurship, to create an environment of free competition, to protect private ownership;

- restoration of permanent jobs, creation of new permanent and seasonal jobs in the direction of ensuring employment of the population;

- implementation of the system of directing students who have studied at the expense of a state grant to work in regions with a high level of poverty for a period of 3 years;

- in the direction of accelerating the reforms in the banking system, to consistently implement transformation processes in state-owned banks and to introduce a clear mechanism for reducing interest rates combined with anti-inflationary policy;
- development of cooperation in industrial sectors and increasing the competitiveness of the sector, creation of a complete chain of production;
- to increase the export potential and ensure foreign exchange earnings, to accelerate activities of assistance to exporting enterprises in this regard, etc.

In short, as a result of high-quality and timely implementation of complex measures in the priority directions, in the conditions of the deepening of the global crisis in the world economy, the ground will be created for ensuring the stable growth of our national economy by the end of this year and for further accelerating the pace of economic growth in the following years. This, in turn, affects the measures being taken to reduce poverty in our country.
