**Abstract:** *In this article, in the Republic of Uzbekistan and a number of abroad Changes in the preschool education system in the countries and this the expected results of the changes, our President in the Republic of Uzbekistan In the past period, the attention paid to preschool education. Currently, changes in the quality of preschool education, scientific research and their results are discussed.*

**Key words:** *Innovative ideas, pedagogical skill, Great Britain technology, China technology, Japan technology, South Korea technology.*

Today, the new Uzbekistan has a wide scope in all aspects changes are taking place. One of these areas is preschool education is a field. In this field, new pedagogical technologies and innovations are currently being used changes are taking place based on ideas changes are taking place primarily in the field of pre-school education the reason for raising the level and creating many opportunities for pedagogues . In today's globalization era, the field of preschool education has its own way. It is distinguished by the fact that it is developing. At the heart of it is this in all place including: a large-scale change in the outskirts of the village, birdhouses and villages work is being carried out. Pre-school education in remote villages In order to increase the coverage of institutions, public-private There are many preschool educational institutions in partnership is happening. In a very short period of time, children's coverage of preschool education is 4 times higher and the fact that it has increased is proof of this Pre-primary education coverage rate is very low and now it is important to increase this rate to 98%targeted and how effective the changes in this area are is a proof that it is being implemented. According to research conducted in Uzbekistan, preschool educational institutions. Children are speech, psycho-physiological, physical, mathematical, and so on children in various aspects that help to develop their competence it is assumed that they are unable to create conditions for its development .Instead, preschools educate children while their parents are at work. It is a very sad situation that it has become a place of detention. This situation Currently, there are many decisions and orders regarding the fundamental improvement of state, non-state, and private preschool educational institutions and their reform. A number of decrees and decisions are being developed. These decisions are foreign countries and our own traditions. Currently, it is not only in Uzbekistan, but also in all foreign countries .There are many changes in the field, including education in Great Britain If we consider the system,

boas in this field are from 2 to 5 years old are mobilized to pre-school educational institutions. This education children in the institution have reading, writing and calculation skills form. This is the main focus of preschool educational institutions is focused on the discipline and order of children It is not mandatory to give, but it can be done according to the wishes of the parents will be increased. Only 15 hours a week for kindergartens by the state is financed, and the rest is borne by the parents themselves only school education is compulsory in this country School age includes children from 5 to 18 years old Current research shows the quality of British education In particular, the ranking of British school graduates is losing .We can witness that it is falling. But the discipline in the system and demand is a sign that they don't give up their seats easily will give Great Britain, in particular, is well known for its advanced education system, and Oxford University is known for its discipline. the high level and the teaching of the English language in it are not only modern In addition, perhaps it is far ahead of the time. Their courtesy nature is the ability to respect one's own and others' traditions and education in them makes it possible for the system to be stronger. The education system in Britain 2 It is carried out by sector. The first of them is the public sector , education is covered by the state. This sector is mainly England; NorthernIt is observed in Ireland and Wales. The second sector is paid education, which includes tuitionIt is covered by the students themselves. This is the case in Scotland launched. Currently, the educational technologies of a number of countries are being studied and among them Korean technology, Japanese and Chinese technologies It is distinguished by its efficiency. It is unique to these countries the quality of education in harmony with our nationality, taking a model from their qualities increase is our highest goal. From these educational systems, Japanese education to its folk traditions reliance and the fact that discipline occupies a high place in this type of education this system guarantees its effectiveness. Chinese technology with its innovative ideas and approaches through them to the next generation using highly effective and easy methods we need to emphasize that it is possible to teach. In short, in every country today there is a wide range researches and scientific conferences are being held. And on the basis of these, the young generation providing highly effective knowledge, training them using advanced technologies That's why it's a lot in the field of preschool education today changes are taking place. All this is a relief for us educators and and for the next generation, the opportunity to become qualified staff and mature specialists creates.
