Abstract: *This article states about how to develop and improve our learning language skills by utilizing modern teaching methods, programs especially in the style of online learning.*

Key words: *Student centered instruction, instructor -led instruction, content centered instruction ,passive receptacles, ranging from , in terms of, human beings, particular field, core conception, learning process, learning atmosphere.*

Contemporary and useful methods or textbooks, programs in education especially online language learning.

To begin with, there are majority of styles ,ways and never old -fashioned methods in terms of learning language thought out the world. I will share you some methods.

1.STUDENT-CENTERED INSTRUCTION.

Student - centered instruction motivates autonomy of learning imparting skills and practices that foster independent problem solving. Every student has an active voice in how and what they can learn, utilizing their own prior experiences and new information to realize concepts and develop solutions. In this case instructors will be guide this process by providing frameworks and special structures that students can use and build on, as well as guide them during their decision making process.

2.INSTRUCTOR -LED INSTUCTION

While still used in many parts of the world this teaching style is quickly waning in popularity as it is considered to be too „close ended“.

Adopts a more authoritarian tone and style, where students are passive receptacles of the knowledge being dedicated. The teacher is regaled as an expert or master of the subject matter. and there is little to no involvement of the student in the studying process. Didactic lectures and expository monologues are used to impart the lesson ,followed by a question and answering session

3.CONTENT CENTERED INSTRUCTION

Students immerse themselves in subject ,focusing on learning the core conception instead of the rules that make it up.

Originally used to instruct language& grammar advanced practices have adopted CBI principles

Use stimulating content or even gamification ,encourages students to find or create their own content on a subject ,bolstering curiosity and creativity ,critical thinking .Find related topics to the subject at hand to show how the subject matter depends on other topics.

However the style of learning in a way of online has a crucial role in every human beings life. As the rates of Carona virus started spreading out ,we studied from distance just sitting at home ,and at that time we were aware of the convenience of social network Honestly, we are rising in area which is convenient to learn any kind of foreign language .Which means that the internet connection is undergoing various changes and becoming more popular .Moreover this helps to create comfy learning atmosphere to everyone ranging from old to young generations .For instance: platform You tube provides you to get a better knowledge by watching their videos and can help you to wide your subconscious horizon or change your worldview, not only by online lessons of instructors or native speakers ,but also you will have an opportunity to watch movies that you want and it also helps you to enjoy learning in a suitable way .

Apart from these, I don't exactly remember its name that was a program which helps you to interact with real native speakers via internet .I mean it is the best way of learning and improving communication skills in terms of that language I just saw English version of it.

Conclusion: From my perspective it is effective way of learning language even communicating with our friends or relatives, practice based learning is beneficial for every individual which makes us perfect in a particular field.
