Projects of the company own funds, attraction loan funds and Uzbekistan Republic information and communication technologies development fund funds at the expense of done increase is being planned .

As all business entities face various uncertainties and risks in the digitalization of the economy, there are a number of risks in the market of telecommunication services, and it is urgent to take measures to prevent them and reduce their impact on the activities of enterprises as much as possible.

The political situation, economic situation, legal basis, socio-cultural level of the people, scientific and technical level of networks, natural and economic conditions and the appropriate structure of the market affect the activity of telecommunications enterprises.

Company activity during economy risk of risks the following types directly effect does:

- work release (weather , technical, technological , distribution , organizational , unexpected death risk management and others);

- brokerage (income directly loss risk , directly money loss and proprietary damage to see the risk , fu dependency responsibility appear to be danger and others);

- commercial (product crush unable to give risk , the product c father not get risk , loss danger and others);

- financial (credit, property , insurance , currency , deposit, price connected q has been illiquidity , economic , risk overtime and others);

- innovative (social , scientific technical development the results current to do with connected q has been risk).

" Uzbektelecom " JSC all surface coming risk risks prevention get in order to 2 y directions belongs to affairs take goes to :

1. Risk taking in the activity is available dangers and his as a result likely losses prevention get for insurance from the mechanism is used. These goals (buildings, vehicles, employees insurance and others) in 2022 for 5.7 billion. soum amount funds spending planned.

2. Insurance to do demand which does not risk risks regarding the following affairs done increase planned :

- correctly determine and maintain the ratio of financial performance indicators to the risks of commercial activity, looking for ways to increase the profitability of investments to find;

- clearly defining the priorities in the distribution of resources based on the volume of telecommunication services provided on the basis of the risk of inappropriate distribution of resources;

- continuously analyzing the risk of economic instability and demand changes and making changes to approved plans based on market conditions to go

- skillful use of funds for financial risks, investing passive funds in profitable projects or depositing in banks to put

Today, the telecommunications market in the Republic has emerged with its positive and negative sides, the market needs have been determined, and the consumption volume of users of telecommunication services has been formed. In particular, the market is affected by the following factors:

Internet consumption in the country is increasing day by day and more and more traffic is being consumed by users. According to statistics, from 2010 to 2021, the number of Internet users increased 4 times (from 5.5 million to 22 million), and this indicator continues to grow. This period of the Internet come in coming also (spread , spread) from 20% to 66% increased. Users by day of traffic consumption increased that he is going account take , external the channel expand necessity important matter being remains.

From this except international calls users calls done increase work abroad for manufacturers mobile from programs are using it and Internet channel loading increase and of traditional telephony traffic decline through international from calls of income to decrease take is coming.
