**Annotation.** *In this article, the aspects that should be paid attention to in improving the professional skills and competencies of future teachers are analyzed. Recommendations for the development and implementation of immediate measures to increase their spiritual literacy have been formulated.*

**Keywords:** *education, professional competence, skills, integration, future training of teachers, spirituality.*

Processes of training highly qualified pedagogic personnel that meet the requirements of the time are the main requirements of the international labor market today. The reason is that society needs people who think independently, who can express themselves, and who can make an objective assessment of themselves. They are the driving forces of the development of society. This, in turn, creates the need to update the content of continuous education that serves to develop the professional competence of specialists, to widely introduce innovative forms and methods of teaching, modern information and communication technologies, and advanced foreign experiences in teaching. Based on this, a number of measures are being implemented in educational institutions to improve the quality of education and to ensure the continuity and continuity of educational stages.

It is known that modernizing the educational process in educational institutions, developing the professional competence of pedagogues in increasing the quality level of the system of training pedagogic specialists, making them relevant to the field the use of modern advanced foreign experiences, equipping with professional knowledge, qualifications and skills, independent creative use of scientific and technical innovations, and the development of skills to solve promising tasks are considered important tasks. Here, special attention should be paid to the professional competence of future pedagogues and their analytical skills. Professional competence, professional self-awareness, respect for professional values and orientation to the profession is a universal culture that is manifested in the example of the professional formation of the growing young generation, support and development of innate abilities. are generalizing concepts that are one of the components.

Formation of professional competencies of future pedagogues is to ensure that they act successfully on the basis of practical experience and knowledge in solving professional issues. Realization of professional competence and professional identity is considered a lifelong process, a person chooses a profession from the stages of dreaming,

trying, choosing and realizing them, then enters a profession, and later changes professions in the world, in his own changes his profession or specialty depending on the change, his attitude to work. The idea of a perfect person is a noble idea of both national and universal importance, which embodies spiritual and physical perfection and motivates a person towards noble goals.

In the field of higher education, determination of the actual needs for education is carried out based on the determination of the level of their professional training, the aspects that meet the requirements, as well as the existing shortcomings and gaps. Based on this, it is appropriate to implement innovations. This leads to the development of pedagogical competence. Another important aspect of the educational process

one is to organize the educational activities of students based on their inclinations and direct them to the personality of the student. These include students' interest in learning, their sense of duty, and methods of forming responsibility in the educational process.

Organization and coordination of cooperative activities of subjects in the improvement of pedagogical processes, the effectiveness of developing their activity in the direction of the goals that need to be achieved depends to a large extent on existing motives and motivation. Education is a social institution that reflects all the problems of society. In modern education, it is necessary to enrich and improve spiritual and educational values, to humanize it through the educational process, to activate educational activities with spiritual and educational growth, to provide pedagogical and psychological support. It is necessary to educate highly moral, responsible, creative, competent citizens through support. The spiritual and educational development of a person is the main issue of current education, and for this, the teacher must have a high level of spiritual and educational competence. Spirituality is a manifestation of the qualities related to the enrichment of the inner world of a person, aimed at opening up his personal potential.

In conclusion, it should be noted that introducing future teachers to various methods of organizing and managing pedagogical processes, developing their professional competence, arming them with the secrets of professional skills, and forming a methodology for working with pedagogical innovations is one of the important factors that increase the effectiveness of education. is considered In order to ensure the effectiveness of pedagogical processes, future teachers should have strategic planning, design, modeling of pedagogical processes, coordination of activities of pedagogues and ensuring their activity, methods, methods and principles of managing the pedagogical process according to situations, knowledge of innovative technologies and their on the basis of which it is necessary to form the skills of organizing innovative activities of the subjects of the pedagogical process.
