**Key words:** *industry, efficiency, entrepreneurship, business, environment, entrepreneurial activity, foreign investment, innovative economy, economic mechanism, investment system.*

Introduction of systematic democratic market reforms, further deepening of economic liberalization processes, consistent implementation of structural changes in industrial sectors, continuation of modernization and diversification processes are the main factors of Uzbekistan's success. The continuous growth of the country's gross domestic product is not due to the traditional raw materials industries or the favorable conditions in the world market, the high prices of some raw materials and materials, but on the contrary, it is provided due to the rapid and priority development of the production of competitive finished products and modern service industries.

In general, industry is one of the main sectors of the economy of our republic. Because the industry is fundamentally different from other sectors and sectors with its added value creation, its role in meeting the needs of the population and its high-level production locomotive. The development of the industrial network leads to the development of the national economy at a steady pace. Processes of diversification will be improved due to the processing of all resources mined and cultivated in the field of industry, production of new products from them, increase in assortment and nomenclature.

At the same time, the effective management of business activities in the development of the industrial network as an important indicator of social relations belongs to all aspects of the life of the society. In other words, management establishes an agreement between all participants and elements of production, regulates the content and norms of the relations that have arisen, and contributes to finding effective ways of using resources. This activity is constantly improving and developing.

From this point of view, it is important to apply modern management principles in small business and entrepreneurial activities and achieve high development rates based on it.

Management activities in the enterprise are carried out on the basis of certain principles. These principles, firstly, establish agreements between production participants, and secondly, prevent possible errors and increase the efficiency of management work.

Modern science and management practices accept the following principles of enterprise management as the most basic: scientificity, systematicity and complexity, individual management and collegiality, order and justice, material and moral stimulation of employees, thrift and efficiency, initiative and corporate spirit, authority and responsibility.

To date, a number of principles of production organization and management have been used in the development of the industrial network. The principles change over time and adapt to the existing conditions. Based on the requirements of modernization of the economy, it is necessary to develop new and improved principles in this direction, which will determine the country's prospects.
