**Introdaction:** *In the article the information about malicious information, destructive ideas, and threats to national morals spread through the Internet today, the demands and needs of the media for the development of the young generation growing up in the era of globalization, on the basis of national values, protection of our youth from foreign influences that undermine youth education, educating them as morally strong individuals who can resist information threats, prevention of information attacks is presented. In addition, issues such as the role of high-quality education and modern computer technology in the development of New Uzbekistan, the formation of information and media culture in the rational use of the Internet by young people have been analyzed.*

**Keywords:** *information, globalization, threats, media literacy, digital society, communication, internet, cyber security, national value, youth education, reading culture, legal immunity.*

In today's modern conditions, the demand for media is increasing. Because of this, the need for media literacy and information culture is increasingly felt due to the acceleration of information technology in the information society and the sharp increase in the volume of information. Therefore, the legal education of young people in terms of media literacy and the formation of their legal culture is a complex and continuous process [4, p. 6480-6487] In the 21st century, it has become difficult to imagine our daily life and work without information media. The influence of the media on various spheres of life is increasing day by day. This puts new tasks before the educational system, requiring a person not only to know modern technical tools and the ability to work with them, but also includes independent creative work skills related critical thinking (ability to interpret media messages, understand various media texts), search, process and presentation of material to a certain extent. Let's talk about the term "media" mentioned above, it is defined in the dictionary of media terms as follows: "media (lat. media - means) - means of (mass) communication - technical means of creating, recording, copying, reproducing, storing, distributing, perceiving and exchange between the subject (the author of the media text) and the object (the public audience) [5]. We can include television, computer, radio and mobile communication devices, internet etc. among these tools. Among this content, today mobile communication devices have a special place and are important in conveying messages and information. After all, we can say that our smartphones, which are considered convenient for all of us, have become one of the technical tools that manage online life today.

For 5 years, the sphere of information technologies in Uzbekistan, like all other spheres, has undergone great changes, which subsequently affected not only the economy, but also the development of the country as a whole. In particular, the speed of the Internet has increased, the number of users of the world wide web, optical communication lines, mobile base stations, IT specialists, etc. has increased significantly.

Today, we can observe colossal changes in the field of information technology and communications in the country, and these changes are largely due to the support provided by the government over the past 5 yIn addition, on July 24, 2019, the grand opening of the first Technopark of Uzbekistan in the field of IT, IT Park Uzbekistan, took place. And now, exactly two years later, IT Park, in honor of its birthday, as well as in order to improve interaction with foreign countries and partners to promote national IT products to the world market and attract foreign partners to jointly implement projects and develop the IT industry in the country , organized an online conference "IT Park Rewind 2021", which was attended by local speakers with presentations on the development of a strategy for creating an IT culture in Uzbekistan, the specifics of creating IT projects and IT companies in our country, supporting local IT businesses, etc. etc.

The event was attended by Adviser to the Prime Minister - Head of the Department for Development of Information Technologies, Telecommunications and Innovation Olimjon Umarov, Minister for Development of Information Technologies and Communications of the Republic of Uzbekistan Shukhrat Sadikov, First Deputy Minister for Development of Information Technologies and Communications of the Republic of Uzbekistan on Digital Economy and e-government Oleg Pekos, Deputy Minister for the Development of Information Technologies and Communications of the Republic of Uzbekistan for Investment and Finance Jamshid Egamberdiev, Director of IT Park Farhod Ibragimov, as well as more than 40 foreign representatives of major companies and organizations such as Epam Systems, SEZ Innopolis, IBA Group, Bars Group and many others.ears.

### **Conclusion**

Today, the number of people who become victims through the Internet is increasing year by year. One of the main reasons for this is that out of curiosity or need, they fall into the evil web of wicked people. Especially in the internet networks, the evil people who disguise religion in the

way of their original goals and cause many people to go astray have also found a place for themselves in the internet networks. Even if the law against religious sects, extremism, threats and measures to prevent it are taken, it is still not possible to completely eliminate this threat. In order to prevent these unfortunate events from happening among the population, especially among the youth, it is necessary to give the child media education skills from school time.
