*research advisor, Samarkand State institute of foreign languages*

**Abstract:** *For all societies, education is crucial. It also plays a crucial role in society. The fundamental driver of both societal and individual development is, simultaneously, the caliber of education. How then can we obtain quality education? What issues should we resolve along this road? Such matters are clarified in this article.*

**Key words:** *education, ability, pedagogical, skill, creativity, knowledge, individual, society, traditional education system, progress, information.*

*Education- is the most powerful weapon  
which you can use to change the world  
Nelson Mandela*

### Introduction

Education is the process of passing on knowledge, abilities, and skills; it is the primary way to get someone ready for life and the workforce. Information is gathered and training is done during the education process. In a strict sense, education is the act of teaching. However, it also refers to the process of disseminating information outside of traditional educational settings, such as the home and other social contexts. « We all understand that science and education are the foundation of progress and the driving forces behind the strength and greatness of the nation. The President of our nation declares, "Our education system and the education we provide to our youngsters are strongly tied to our tomorrow, the bright future of our country».

Every nation's education is its reflection. Throughout his life, a person is constantly seeking information. While there are many challenges in the process of learning, our contemporary way of life provides all the necessary conditions.

Although there were fewer options for education in the past than there are now, our forefathers still managed to complete their education. Of course, quality is also significant in this situation. The use of innovative educational technologies in teaching, the effectiveness of the organized lessons, and the use of pedagogical and information technologies in each subject for better student learning are all necessary to increase the quality of education.

One of the top priorities is to establish experiential learning in the classroom so that students can use their information in the real world, select a profession, pursue independent learning, and increase their level of knowledge.

Our nation's National Curriculum was developed, and the textbook policy was established based on the program, under the direction of Matthew Goldie-Scott, an international authority in the field of education and an educational consultant for organizations like the World Bank, UNICEF, and the European Union.

We discussed with a foreign expert how 21st-century skills are being incorporated into Uzbekistan's educational system, the challenges of building a contemporary learning environment, the particulars of the industry, and the future of education.

-Through this discussion, we hope to expose to the public the genuine nature and intent of this program and to get your opinion about the National Curriculum across. What is the concept, tenet, and philosophy of contemporary education, in your opinion as an international authority?

- Education has undergone constant transformation up until this point. Education and technology curriculum in particular have transformed. The element that supports the foundation of education, however, remains constant. Therefore, it was determined that a number of elements should be considered when enhancing education.

-The main objective is to produce politically engaged, culturally literate, and opinionable individuals who are prepared to contribute to the nation's future and economy.

Today, nearly all nations and governments are unsure on what their best approach to education should be. There are numerous options for educational coverage. Not all kids had access to education fifty years ago. The states have been tasked with achieving the objective of equal inclusion of all citizens in education in this millennium and the era of sustainable development. Success in this area merits praise without a doubt.

The number of students enrolled in a school is directly related to its quality. Not every youngster receives a top-notch education. Everyone should have equal access to education since it is important to ensure its quality. The country's history, social structure, or economic standing shouldn't be a barrier to accessing a high-quality education.

The quality of education is directly related to the quality of instruction in the classroom. The strength of an educational system largely depends on the quality of its teachers. A quality teacher is the central figure in offering quality education. The teacher has always been considered a second parent to students. Students are generally influenced by their teachers because they spend most of their time under their guidance in schools. For effective teaching and learning activities, teachers must prepare lesson plans, provide instructional materials, and adopt appropriate teaching strategies to achieve instructional objectives. For effective learning, a teacher needs to be equipped with all these skills and strategies so that he can help his students learn.

Education is also necessary for everyone. People get acceptance and respect through education. It is an essential component of life on both a personal and social level, helping both society and his own well-being. Providing high-quality education results in people who are capable of keeping up with global advancements and are competitive on a global scale. Equal learning and academic opportunities should be provided to all children. Education, in my own words, is only a step to help us improve in all facets of life because the development of a nation greatly depends on the quality of education, but it is

meaningless without the right direction supplied by the teachers, administrators, and instructional aids currently in use.

Good Quality education is a given name to those that have the complete or necessary requirements in having a good atmosphere for learning and proper growth.

George Washington Carver, a renowned chemist, famously said: "Education is the key to unlocking the golden door of freedom" (Carver). Why are more than 57 million kids not enrolled in school globally if his claim is accurate? (UN). In order to guarantee that issues like a lack of high-quality education may be resolved in the future, the UN established global goals. Furthermore, they want to raise the standard of education as one of their objectives. The quality of education can be impacted by the hiring of more qualified teachers, but it can also be significantly raised by having more resources available. The attendance rates of many schools will decline in the absence of adequate resources, such as Internet connection or modern textbooks. Some contend that the most essential strategy to raise educational quality is to hire more qualified instructors. It is undeniable that having qualified teachers is essential to a child's progress. As stated by UNESCO, "the shortage of teachers, combined with absenteeism and the lack of qualifications, is a major barrier to learning" (UNESCO). Even while this might be the case, without at least the most fundamental resources—such as books and workbooks—to instruct their students, teachers would be all but worthless. The absence of materials leads to chaos in the classroom and may overwhelm the instructor, which may be one reason why teacher absenteeism rates are rising.

Characteristics of high-quality education.

It establishes the framework for equity in society. By ending the cycle of poverty, addressing inequality, and attaining gender equality, this is made feasible. It is essential to achieving the objectives of typical global development. It equips the students to make their best contributions to their own and the community's growth. Regardless of a learner's color, ethnicity, gender, geography, or financial situation, it focuses on their social, mental, physical, emotional, cognitive, and economic development.

- A person can advance with sustainable lives, find greater employment possibilities, and lead a healthy lifestyle with superior education. The best education available inspires creative thinking. It enables the prosperity of people, communities, and society as a whole. Well-educated masses can accept community resilience and join a peaceful democratic society. The success of the country can be guided by three solid educational pillars. There are several approaches to bring high-quality education to every home, including:

- Students can easily access qualified instructors who instruct in a kid-friendly manner to help them realize their greatest potential. Additionally, it calls for children's engagement in the process.

- Access to quality learning resources and the usage of tools for each student's professional growth

- A base (excellent schools with reassuring, secure, and uniform learning environments)

● To ensure successful quality education, the following actions must be taken:

-The principle that "learning is mandatory for all" will be given top priority in every nation.

- Every child must be enrolled in and attend school, as required by law.

-Developing and executing stringent measures to meet the severe crisis in the education sector in developing nations;

- The topic of educational reforms and their persistence

● A thorough explanation of the actions taken by the educational framework and how it monitors and accelerates progress.

What should we focus on first in order to attain high-quality education? How did developed nations attain this outcome in the realm of education? I think that in order to provide students with a high-quality education, schools should assess the following variables:

1. Pedagogical abilities

2. Teachers' caliber

3. After-school activities...

Let's take a quick look at each of these elements. Extraordinary general and special qualities are required for the professional activity of a teacher. The following pedagogical skill categories are identified:

-sensitivity to the student as the object

-communication is showing others kindness.

-professional maturity, or a sense of pedagogy

-personal characteristics, persuasion skills, and logic

-emotional stability and self-control in inventiveness,

-aptitude for creative work.

What abilities must a teacher possess to deliver high-quality instruction?

-ability to independently choose educational materials and choose effective teaching strategies.

-ability to adequately describe the educational material and ensure that it is understandable to all students.

-ability to use pedagogical technologies during the transition process.

-ability to plan the development of students with group.

By planning diverse activities outside of school, the teacher can create the conditions that are important for the child's socialization.

To achieve quality and efficiency in education, it aims to identify and fill in the knowledge and skill gaps of the students throughout the class. In my view, hosting discussion nights, other successful strategies for extracurricular activities include working with gifted kids and planning various mind-strengthening games.

In summary, education is the process of passing on knowledge, abilities, and skills to prepare for life and the workforce. It is the foundation of progress and the driving forces

behind the strength and greatness of the nation. Quality of education is important, and experiential learning in the classroom is essential to increase knowledge.
