Abstract: *In this article, the students' need for using electronic dictionaries in the process of learning foreign languages and their effectiveness in the educational process are presented.*

Key words: *electronic dictionary, electronic textbook, technology, mobile applications, web application, educational process, efficiency.*

In order to take the popularization of teaching foreign languages to a new level in our country and to organize systematic work for the development of the field, to educate the growing young generation in an all-round way, to create all the conditions for this, the Cabinet of Ministers of the Republic of Uzbekistan "Learning Foreign Languages" The decision "on improving learning" was developed. Based on the draft resolution, the following measures were developed:

– introduction of effective worldwide teaching methods, programs and textbooks in pre-school education organizations, general education schools, academic lyceums, higher education institutions and educational centers;

– purchase copyrights of modern educational and scientific literature, textbooks and instruction manuals published in foreign countries, international tests and relevant permits and licenses for their introduction, content aimed at teaching foreign languages;

– development and implementation of information and communication technologies, software projects in the popularization of learning foreign languages;

– creating video clips, games, entertainment programs, films and other educational content for the thorough mastery of foreign languages and the formation of basic language skills;

– attraction of highly qualified specialists, including local and foreign experts, etc. on the basis of civil-legal contracts;

In order to further improve the teaching of foreign languages, special attention is paid to the use of advanced technologies in the educational process and, in

particular, in the lessons, and on this basis, to increase the efficiency. This article deals with the use of electronic dictionaries in the educational process and its effectiveness in teaching foreign languages.

The use of electronic dictionaries in the educational process is considered by many experts as a promising method of adapting modern education to the ever-increasing flow of information. The fact that the possibilities of using electronic dictionaries are higher compared to the paper form allows them to be widely used as a source of quality reference, a useful and necessary modern tool for learning foreign languages. The capabilities of modern electronic dictionaries today are wide enough: speed, ease of finding information, large volume, sound and graphic illustration of the word, spelling checker, interactivity, conciseness of the text, etc. When creating electronic dictionaries, the dictionary was created by its authors based on modern lexical materials and reflects the language and vocabulary. For this reason, electronic dictionaries become a universal tool for speech trends, making the translation process fast and interactive, thus becoming a universal tool in the education and training process. Nowadays, there are many different electronic dictionaries available, both offline and online applications. According to experts, the availability of the mobile version of the electronic resource has made it popular among students, students and independent learners, because students have the opportunity to use the digital resource during lectures, practical training and independent work.

Language learning process. often words are conceptually not in alphabetical order, but a source of high-quality references, the process of acquiring useful and necessary modern words, phrases or terms.

When teaching students of non-linguistic specialization, it is impossible to imagine a foreign language without mastering a certain amount of special vocabulary presented in the minimum of educational terminology. Students need information that includes learning material, so they need to have search and information skills, as well as the skills and abilities to use translators, dictionaries, encyclopedias, reference books, etc. need Working with electronic dictionaries and translators will help a lot in this regard. The speed, volume, visualization and technical options offered by digital media create a range of opportunities for learners. in addition, as additional benefits, resources related to improving speech culture, enriching individual vocabulary, introducing norms of the language being studied, etc. are also available in some electronic resources. The introduction of digital dictionaries, mobile applications and web applications into educational activities in universities serves a high level of professional training.

Aspects of the use of modern electronic online and offline dictionaries, in particular, thesauri[23], were revealed in the study of literature. Aspects can be considered as advantages, disadvantages and peculiarities. It should be noted that they can be divided into technical and pure teaching methods.

The use of electronic dictionaries in language learning is a promising, irreversible and purposeful process of adapting modern education to the ever-increasing flow of information in the educational process.

Online and offline electronic dictionaries are replacing printed ones. In order to master the lexical features of the studied language in the most practical way, it is appropriate to refer to modern types of dictionaries. An electronic or digital dictionary can be defined as a program or portal equipped with a user-friendly interface and automatic, fast lookup tools.

Considering the functionality of e-dictionaries and the reasons for their popularity in learning, it is worth noting that e-dictionaries are an integral part of students' learning process, providing many conveniences (including pronunciation functions). has become and therefore deserves special attention. teachers and researchers.
