**Annotation:** *In this article, the technological conditions for the development of pedagogical skills of future teachers, the means and sources of increasing attention to the profession, the means and sources of increasing love, the ability to conduct innovative professional activities, the conditions for increasing the professional motivation of future personnel. is discussed.*

**Key words:** *future teachers, pedagogical skills, innovative professional activity, practice, motivation, intelligence, education, training, pedagogue, concept of profession.*

In the modern conditions of the development of the society, the reform of all links of the educational system, including higher education, is of great importance. The main goal of these changes is to form an enterprising person capable of creative activity. The realization of this goal is inextricably linked with the idea of humanization of education, and includes the actualization of the problem of developing the creative ability of the future teacher as one of the goal principles of higher education. "Creative person", "creative approach", "creative achievements", "think creatively", "manifestation of creativity"... These concepts are one of the main criteria for determining the indicators of modern professional skills in the training of highly qualified personnel in society. is the best among the best. In the era of new development of Uzbekistan, it will be the main link of the great creative work that is being carried out in order to ensure that the young people who determine its future become mature, perfect, highly cultured and spiritual in all respects. It is crucial for internal education pedagogues to have high scientific methodical knowledge and high skills. Development of human capital in our republic based on the requirements of the labor market, introduction of digital technologies and modern methods into the educational process, training of highly qualified, creative and systematic thinkers, able to make independent decisions based on international standards, demonstrating their intellectual abilities and moral integrity creation of necessary conditions for formation as a person is defined as the main strategic tasks. In-depth study of "Pedagogical skills" is important in finding a solution to this problem in higher pedagogical educational institutions. What is pedagogical skill? What is its essence? What do you need to know to get them? Modern pedagogy and psychology interpret the concept of "pedagogical skill" differently. For example, in the "Pedagogical Encyclopedia" the definition is explained as follows: "A skilled master of his profession, highly cultured, deeply knowledgeable of his subject, able to analyze the fields of related sciences well, perfect the methodology of education and training the specialist who has acquired it".

Possessing pedagogical skills, thoroughly mastering the secrets of pedagogical techniques, among all professions, the teaching profession acquires a special and important

social importance. After all, a teacher is a memory of the soul of the young generation, a person who educates young people. Today, it teaches the laws of development of nature, society, social life, and thinking, training them ideologically and politically, prepares young people for work, helps them master the secrets of professions and social and economic situations that are important for society. solves. This responsibility requires the teacher to be a master of his profession, to have an educational impact on the students, to develop their interests, abilities, talents, beliefs and practical skills in every way. It requires a professional to find them. To do this, constantly improve the professional skills, skills and qualifications of teachers, take care of them in every way, create the necessary conditions, provide the necessary material, scientific-methodical and technical support, creative teachers' it is necessary to help to regularly increase initiative. Based on this, it is very important to prepare skilled and responsible personnel who know their profession and specialization from students.[8]

The formation of pedagogical skills of students is primarily taught to teachers and educators in pedagogical creativity, pedagogical techniques, mutual cooperation between teachers and students in the educational process, communication tactics, speech culture, thinking, spiritual knowledge of the educator. organization and implementation of educational and educational work, in this process it teaches the characteristics of being able to control behavior and emotions. Provides information about the system of pedagogical activities that develop their profession. Pedagogical activity is the labor activity of specially trained teachers who are accountable to the society and the state in order to prepare the young generation for life and work.

The system of skills necessary for the effective pedagogical activity of teachers: knowledge, ability to understand the child, observation, speech skills, organization, ability to see the future, distribution of attention, correct assessment of the situation, emergence such as eliminating all kinds of possible conflicts in time, making students interested in learning. Preparation for pedagogical activity is carried out by regular performance of the following tasks by future teachers:

1. Future teachers will be equipped with the theoretical and methodological foundations of pedagogical skills.

2. The components of the science of pedagogical skill, such as pedagogical technique, pedagogical cooperation, pedagogical delicacy, pedagogical ability, educator's skill, management of the educational process, speech culture, educational technology, pedagogical creativity, and reflection, acquire the correct knowledge system.

3. Future teachers will develop the need and desire to independently master the secrets of pedagogical skills reflected in our national customs and traditions and the rich creative heritage of Central Asian thinkers.

4. Based on the acquired pedagogical-psychological and methodical knowledge, skills and qualifications, each future teacher forms his personal pedagogical skills.

5. They regularly master the theoretical and practical foundations of organizing and managing the educational process based on the latest modern methods and forms typical of world standards.

6. In order to improve their professional skills, teachers acquire the forms, methods and tools of personal development.

7. Teachers continuously learn information about the nature, function, and structure of the teacher's skills.

8. They form their professional skills based on the free use of modern information technologies and the portal system.[5]

It is worth noting that education is important not only as a science, but also in the education of a person in our society in improving the spirituality and enlightenment of our people on the way to the rise of our new Uzbekistan. In conclusion, the pedagogical features of the formation of creative abilities in students require the use of teaching technologies in teaching works based on a technological and creative-research approach. It is important to increase the effectiveness of the educational process, to expand the possibilities of mastering the competencies of learners, and to systematically apply teaching based on the student's capabilities.

The main principle of pedagogical skill is that creativity is always his companion in achieving great results with little effort. Pedagogical skills are formed only in a capable, talented person who is interested in pedagogy and its competence. Pedagogical activity is creative in nature. The teacher forms the student's personality, makes independent decisions in unexpected situations, solves pedagogical problems, independently manages the educational process.[3]

Another important component in the implementation of innovations in the educational process in higher education institutions is the teacher, his professional competence and innovative activity. Relying only on interest in education cannot be a valid result of motivation. In this case, the most important and effective method is the introduction of motivational-problematic situations or the setting of tasks related to special knowledge that reflect the social nature of the studied subject.

The following are the main requirements that ensure the necessary and sufficient level of pedagogical training of a specialist:

1. Teaching skills.
2. Teaching skill
3. Personal qualities that provide a humanitarian factor in the educational process;
4. The ability to objectively control and evaluate the knowledge of learners

Teaching skills:

- Professional ability and erudition;
- Psychological-pedagogical preparation;
- Ability to teach learners to think independently and acquire new knowledge;
- Knowing the forms and types of educational literature;
- Acquisition of new pedagogical and information technologies, practical skills in working with the global network of the Internet;
- Knowing the main forms of teacher training;
- Knowing the methodology of scientific and pedagogical creativity;
- To know the main directions of development of the science and field of pedagogy;

- Ability to use interdisciplinary communication;
- Knowing the basics of rhetoric and the art of public speaking.[1]

An important factor in improving the educational process is closely related to the high level of professional competence of teachers in the educational system. Therefore, it is determined that one of the urgent tasks is to create the theoretical and practical foundations of the process of forming the professional competence of teachers based on the effective use of the opportunities of modern educational technologies and the created educational methodological complexes.

As we mentioned above, every pedagogue who chooses the teaching profession asks himself whether he likes this profession or not. Because there is another important aspect of the issue, which is the problem of whether the future teacher has pedagogical skills or not. However, every profession is mastered and mastered through skills.
