

**PREPARING PRIMARY SCHOOL STUDENTS TO PARTICIPATE IN
INTERNATIONAL PROGRAMS FOR ASSESSING THE QUALITY OF EDUCATION.**

Turgunova Iroda

Kimyo International University in Tashkent

"Theory and methodology of primary education"

1st year master's student

Anotation: *This article describes the advantages and opportunities of international assessment programs, PIRLS, TIMSS assessment programs, improving the quality of education, and conducting educational reforms in international assessment programs.*

Key words: *Education, method, PIRLS, TIMSS, assessment, international programs, education quaity and quantity.*

It has been implemented in our country in recent years to huge economic growth indicators as a result of reforms. Qualified and mature personnel in all areas are being achieved increasing the demand for specialists.

This is the spontaneous interest of our students in lessons it requires increasing the quality and increasing the attention of teachers to all-round education. The above requirements are very important for the educational system education and science fields like in most foreign countries the quality of education by evaluating and monitoring its development it is necessary to attract advanced practices aimed at increasing means.

Participation in international studies on the assessment of the quality of education

What will it give to Uzbekistan?

The results obtained in the research about the quality of education in the country and its place taking into account international standards allows to draw conclusions.

Reform of the national education system, education content, training of pedagogic personnel and their training programs improvement and by experts in creating a new generation of textbooks is used.

Involved leading specialists of various organizations in Uzbekistan by participating in international research while doing local conduct monitoring studies by our specialists culture develops, international assessment of the quality of education

leads to adaptation to standards. Control materials for assessing the quality of national education control materials used in international studies allows development at the level of quality.

PIRLS - Progress in International Reading and Literacy Study

4th grade students' reading of the text and to assess the level of understanding

intended. This is an international program organized in primary classes of students in the educational process understand the read text, interpret it, make the right decisions in independent life at the next stage of education through to continue studying successfully prepares the ground.

The Trends in International Mathematics and Science Study

TIMSS – Mathematics and Natural Sciences

International monitoring of the quality of development and evaluation system.

This research shows that students' mathematics and elementary in natural sciences

4th grade of the school and 8th of the basic school level of mastery of students

comparative in different countries of the world aimed at learning and obtained

of each country according to the results specific features of the educational system and recognizes his achievements.

PISA is an assessment of the educational achievements of students

international program on PISA (English - Program for International Students

Assessment) - of 15-year-old students in different countries literacy (reading, mathematics, natural sciences) and knowledge a program that evaluates the ability to use in practice. This program is held once in 3 years. First in 1997 developed and used for the first time in 2000. A 50-point increase in PISA score per year Gross provides a 1% increase in domestic product (GDP).

What to do to successfully participate in PISA and PIRLS international studies?

To show good results, it is necessary to have at least 2 goals: the first is to prepare teachers and the materials they work with. It is not for nothing that international studies say that the quality of education in schools depends on the professional level of teachers. Therefore, it is necessary to allocate funds for the training of teachers and create new educational materials. Relevant

ministries should invest in the training system, finance it, and create conditions for methodological support.

In order to improve the results of international studies, it is necessary to change the teaching methodology and priority principles in the purposeful training of teachers and in the educational process. For this, we need to train teachers, implement a more active system of developmental education, and provide teachers with materials that they can use more successfully in the educational process. This is the most important thing and you are on the right track, long ago you published sets with materials revealing the characteristics of the PISA and PIRLS research tasks. Now it is necessary to implement these tasks step by step and work on solving the emerging problems.

What does participation in PISA give to Uzbekistan?

PISA results will be announced at the end of 2023. I think this is a very important decision. Countries should participate in international studies, because they are judged externally in terms of international standards, not our internal situation. This is the first one.

Secondly, it is impossible to talk about getting some very good, positive results from the first years. Russia has been participating in international studies since 2000, and our PISA results were below the international average. Only by investing heavily in education for 18 years have our PISA results approached the Organization for Economic Co-operation and Development (OECD) average. How can this be explained? This is explained by the fact that our Russian school (in a sense, the Soviet school) focuses more on the results of science, that is, on providing the young generation with good, deep and long-term knowledge. There was no such need to develop creativity, and there was no time to ensure that the acquired knowledge could be used by all students in various life situations.

In conclusion, it can be said that I believe that the preparation of primary school students to participate in international programs for the assessment of the quality of education is the most optimal and the most correct solution in all respects. taking into account the current educational reforms, if we saturate the traditional style with a modern spirit, it will allow us to go boldly towards the goal. In a word, there is no doubt that these programs will serve to further increase the intellectual potential of our country's youth.
