III - Course students

Annotation: *In this article, it is necessary to prepare, educate the younger generation for the rapidly developing world, to inculcate human qualities in their minds with the concept of modernity, as well as parents and teachers. limda talks about the effective use of innovations in ped-techniques.*

Keywords: *technology, wise, interactive methods, innovative technology, incentives, science.*

Today, students of the adolescent age of education are interested in science, in addition, they have the necessary knowledge, skills and abilities on the topic formation is one of the important tasks in education. In particular, if we approach the above issue on the example of 11 classes, then they are usually described as a group of students who bring a lot of difficulties to teachers. If we do not reckon with their interests, age characteristics, they will remain wrapped in their shell. In order for such problems not to arise, it is necessary that each educator is perfectly engaged in himself, as well as repeatedly prepare himself for each lesson and bring them interesting news on the topic. After all, one of the sages says about the important rule of success: "you have to work every day as if you were put on a scale circuit. Do what you have been ordered to do with the excess so that you can get it with the excess. Knowing, the most popular way to achieve success is to work tirelessly." Today it is quite natural that the topics in native language textbooks cause some kind of difficulty for them.

DISCUSSION AND RESULTS

At this point, another question arises: what methods can be used to form speech competencies precisely in students of adolescent age? Of course, in such cases, various methodological games and methods work well in the formation of students' interest in the lesson and the ability to listen

in them. Indeed, as much as we can say to our hard-working and Noble teachers, who instill in the hearts of millions of our children the knowledge of Science and raise them as worthy people in the land, it is worth it. Summarizing in the above ideas, nowadays the teacher has to work on himself using such opportunities and make an effort to fulfill the role of a traveling star when choosing the right path for students. It is not for nothing that we did not say that the new Uzbekistan will begin on the threshold of the school. Indeed, the role of the school in the upbringing of the younger generation is great.

It should be said that the teachers should work on us as a result of the thoughts that our President Shavkat Mirziyoyev –the new Uzbekistan – begins on the threshold of the school. We must never forget that in the upbringing of the younger generation we will be the main head syllable. The future of the country, its beautiful prospects will rise on the basis of the progressive and innovative ideas of salutary youth. And in order to establish such a prosperous state, today requires our much more responsible and ambitious pedagogical staff to bring up aspiring, knowledge-hungry students. Worthy preparation of the younger generation for a rapidly developing time, upbringing, with the concept of modernity, to be able to absorb the characteristics of humanity in interbreeding into their consciousness requires a lot of work from teachers, as well as on a par with the parent. Situations like this take on a positive turn only if there is research, aspiration and desire.

To this day, the teacher began to treat educators again as the main link in society. And this in its place requires high qualifications from them, skills to provide quality knowledge. In the classroom, the teacher appears as a mirror of the actual fronts in relation to the students. Readers see, understand the world through their teachers who stand in front of them analyze. Therefore, it is necessary for the educator to be able to penetrate into the hearts of his teacher, to grasp the whole world with his hands, to reveal the properties of humanity to the heart, to call for sincerity. Only when we know what the looking black eyes ask of us and what they want can we show them the right path. Knowing how to stimulate during the need, gradually overcoming its shortcomings during the need is the greatest achievement of a true educator. A culture of behavior, correct speech increases respect for the teacher. The speech is fluent, the quality of mastering is certainly good if each given information is told convincingly ,based on clear evidence. It's just that the organization of techniques adapted to the topic depends on the dexterity of the teacher. Importantly, the effective organization of the lesson, creating new methods, depends on

the skill of the teacher. We must create from ourselves such a pedagogue that we will be treated as if we saw a great person, a great person, a reader who has come across in the future. As the younger generation learns to look at the world with our eyes, it is up to us to teach them how to create imagination and live in that imagination. Every work done on the basis of enthusiasm and tireless work will definitely bear fruit!

Each educational process raises its own level of quality with its richness in modern technologies and new approaches. In this way, both the state and educators are equally responsible for the young generation. Currently, interest in the application of interactive methods, innovative technologies, pedagogical and information technologies in the educational process, extibor is growing every day. One of the reasons for this was the fact that until that time, students were taught to acquire only ready-made knowledge on the legislative throne. And modern technologies teach them to search for the knowledge they acquire on their own, independently study and analyze it, and even bring conclusions themselves. The teacher in this process creates conditions for the development, formation, acquisition and upbringing of the individual, thereby in one line performs the task of directing, directing. In the process of education, the student becomes the main figure. Therefore, modern teaching methods - interactive methods, the role and role of innovative technologies-are of great importance in the assumption that students in general secondary schools receive educated, mature qualifications. The word innovation is derived from the English word innovation, which means innovation, innovation. Innovative technologies are the introduction of innovations and changes in the pedagogical process and the activities of the teacher and the student, in the implementation of which mainly interactive techniques are fully used. Interactive techniques means thinking as a team. The peculiarity of these techniques is that they are carried out only through the joint activities of educators and students. The process of such pedagogical cooperation has its own characteristics, which include:

forcing the student not to be indifferent during the lesson, to think independently, create and seek;

the assumption that students have a constant interest in knowledge in the learning process;

Conclusion

Strengthen the student's interest in knowledge independently with a creative approach to each issue; always organize the joint activities of the educator and the student. The most fundamental basis of pedagogical

technology depends on the technologies chosen so that the teacher and the student can jointly achieve a guaranteed result from the set goal. Each educational technology used in achieving a guaranteed result according to the goal set in the learning process can organize the activities of cooperation between the teacher and the student, both of them can achieve a positive result, students can think independently in the learning process, work creatively, search, analyze, draw conclusions themselves, evaluate themselves, the group, and the group can only Each lesson, subject, subject of study has its own technology, pedagogical technology in the educational process of Yakh is an individual process, which is a pedagogical process aimed at a specific goal, pre – designed and aimed at giving a guaranteed result, based on the needs of the student.
