Annotatsiya : today, the most acute problem - social work with families of disabled children. With the rapid growth in the number of children with disabilities of the problem of the actual increases in equal proportions. This tool is effective in rehabilitation of disabled children - this is his family in the social environment for the children most of the mild type. For this reason, in our modern life socio-economic and demographic problems stand out as separate problems among the families of children with disabilities. Unfortunately faced with the problem associated with the birth of a disabled child in the family in many cases the father's family will leave. Consequently, the size of the necessary work for the rehabilitation of handicapped children from the mother for a long time require to carry out activities that require systematic work.

The need to care for disabled children, first and foremost, the parents of the family had been forced to leave their work for the reason that the socio-economic adaptation will complicate the process. Negative trends in *ijtimoiylashtirish* not only objective factors such families, but also subjective factors associated with both of them, if this group of social status, lifestyle, and aware of legislative and law enforcement issues associated with sufficient literacy of parents. Today the state's social policy in the transition stage of the development of society in the clarification of the theoretical and methodological basis of the study it is important to *konseptual* it is associated with liberal values and new features. Economical relations formed in the process of economic change state of the country, a model of social and economic behavior of the population is set to bring change. *Tarbiyalayotgan* disabled children of the family has become the most vulnerable category.

Key words. Children with disabilities trends, and the most vulnerable categories, liberal values, *konseptual* features, integration, non-profit organizations

Introduction: in recent years, the legislative norms regulating measures for the improvement of the situation of children with disabilities were considered and this particular bring results. In the meantime, the family still tarbiyalayotgan the social support of disabled children is not rational enough. The flexibility of defining the capacity of social security and the family socio-demographic characteristics and filtered according to the stratification indicators after considering the importance of the subscriber cannot. As a result, families who have children with severe disabilities such a big part of the practice of economic and socio-cultural remains in isolation. Yuqoridagilar associated with, in the case of the study of the problems of such families is relevant requires additional of meditation. At the present time to learn that many areas of scientific knowledge accumulated a great experience for disabled in childhood.. All families of disabled children into four main groups can be tarbiyalayotgan.¹The first group - feeling-feeling of the scope significantly at the level of the expansion parents. They are a child of bringing up their own specific style giperproteksiya that when called, the children, the whole family life center is, the environment with communicative relations is breaking.Father'sparents from their children at the potential about enough level to imagine able are not, in the mother the extremes in addition to anxiety and nevropsixik strain is a sense of there. Such training style of the child's personality formation on negative effect of this illustrates that while children egosentrizm, dependence escalation, active in the lack, the self itself value decrease like cases with show up will.The second group of the family cold dialogue style with separated are - gipoproteksiya, parents and children between the emotional ties of a decrease, both parents or one of them, one by a child in their own undesirable qualities proektsiyalash. The father-mother child cure to extremes in addition to attention to give, medical staff extremes in addition to the requirements will put it, the child's emotional rejection to due their mental discomfort of their cover to trying it.Exactly so in the family, the parents of hidden alcoholism conditions of many occurs.The third group of family cooperation style with separated are - joint activities parents and children between the mutual responsibility of a relationship of constructive and flexible form.This family of parents socio-pedagogical process of the organization to, daily community children with joint activities, goals , and programs to select from, child independence stimulate permanent cognitive interest is there. This group of the family, the parents of most high

information has. Such family education style in the child security, a sense of, self - confidence, in the family and of the house out shaxslararo relations of the active set of the necessary capacity to develop to help will. Today's the day the children take care of who who do not work parents their labor for the actual compensation did not take (legitimate basis most less than work fee of 60 percent to pay the actual compensation that to calculate is difficult, this man's basic needs from ten to a part covers²). Who do not work parents in the state by a sufficient level of social support, the absence, in the family dependency burden , severity of, full of , who is of the family particularly difficult situation into fall , they remain. The same attitude with disabled children (men and women) of the parents employment to ensure, their economic activity to ensure disabled children, the family that poverty overcome and them successful socio-economic adaptation important resources and the condition to be turned on can. Such care performing to increase great efforts, determination and time require , as, especially, rural areas such care in economic activities with in conjunction done to increase very difficult it is. Record to it, their family who parvarishlanayotir with disabilities there are children of the needs for state budget no how expenses out is unavailable. The fourth group of the family family communication repressiv style possible, this parents avtoritar leading position (often the father) in connection with the description. This family of children intellectual capabilities are considering without, all assignments, orders strictly to complete required are. These demands refuse to or do for physical punishment is used. Children of behavior such style with affektiv-aggressive actions, the eye of age, irritability and qo'zg'aluvchanlik of the escalation noted are. This is their physical and mental condition further complicate the will. From policy to come out, with disabilities there are individuals , many of breeding, a huge country, great moral courage who show citizens' rights protection, enhancing, this in regard to legislation improvement of the necessity of ripening ripening. With disabilities in the individuals, them look at interests to protect and serve does, spiritual-spiritual help to give for the disabled care who those of social protection and enhancing of view point with disabilities children tarbiyalayotgan for parents retirement to the appointment of applicable law the power to add today's day pressing task.. A child take care of to mother the whole day during the time it takes. You mother is in treatment and rehabilitation from frustration, a sense of is, which is a constant worry, psycho-emotional stress, the mother of depression the

position to take the lead can. Often great age of children with rare cases of grandpa, other relatives mother care in making and help to give. You family with two disabled children be, the situation bundanda tougher shades gets. Of children with disabilities in the family other healthy children, the negative effects it makes. That, to them, less attention is paid, cultural and leisure production options reduced, as a result, parents will nazoratsizlik because them a bad read, often ill become.

Psychological tension in such a family, but his family because of the negative attitude of others was the night of the psychological log with children, other families, they rarely interact with the children. Also the parents of all children in a family environment than themselves sick attention to the children, constantly tired, can't understand that without rank. Often such a close family of the living conditions of the disturbing uncomfortable around others, especially the neighbors have experienced negative attitude (to break the peace, especially children or mentally weak of the child's environment quiet the negative impact of his actions affairs). People often children with disabilities are almost full and the dialogue away from the surrounding social relations, the scope of communication enough, especially will be deprived of a possibility to make contact with healthy peers. Available deprived social identity is a violation of the intellectual can lead to delayed development. The child's usual lifestyle moslasholmasligi development, including communication with the audience views the world the violation of its disadvantages wrong shape appears as the main factor. This is like cases, especially, in specialized boarding school tarbiyalanayotgan with disabilities children for a difficult night. Society of such a family of problems every time also properly does not understand, and of them a small a part of others help you feel makes. This attitude on with, parents of disabled children, theatre, film, entertainment, events and etc out they do not go and the same with them from birth starting from the society of completely insulated to make to have doomed it. Father-mother to the child in his nevrotizmi, egosentrizmi, social and spiritual infantilizmidan, her appropriate special education from, the next job to professional guidance giving escape, themselves at home to educate the effort they will make. Disabled child from the family separated learn you can 't, so to "child - mother -family" of communication in all types of roles and shaxslararo relationship of perception to need.³ This mikrotizim other mikrotizimlar (medical staff, neighbors, and friends, caregivers, teachers and others) with

constant contact will be. Policy members to summarize, we have the initiative himself to rehabilitation rehabilitation of children in the family must comply with the initiative of the family come to the conclusion that we can. But this land with disabilities, children of parents for public associations, public organizations in both place is incomparable. Disabled children and families rehabilitation make to social work support the second point - this rehabilitation program down and up is to tie. From the top down oriented program mainly the state by a planned, organized it was and control who has and long - term be known to a family is not but in society available of the problem into account it takes. Developing rehabilitation initiatives mainly financial difficulties and methodological technique of lack due to quvvatlanmaydi support. Family rehabilitation in the national approach to the lack of local government bodies of disabled children and their parents with social work technology of the development of the interest aroused not. The above - mentioned shortcomings from all rehabilitatorlar, social workers and public associations, representatives of certain responsibilities that come out . Of persons with disabilities today, the people's , it is necessary to seek new methods of solving problems. This method is one of the non-profit public institutions. Our country is in the category of social protection of the population of parents of children with disabilities in need of them, material, social and psychological support for the drastic conditions and suffers from a shortage of resources. Operating in different regions of our country in order to eliminate this problem, non-profit organizations and charity events as possible so sahiy has been shown to help men with the assistance of the family. It should be noted that, by children with disabilities to help nonprofit organizations include social adaptation. Usually harmonious social living conditions of the citizens in the society of children with disabilities, socio-economic condition will not be the same. Life is therefore also a place to put certain requirements to customize them to the society. Non-profit organizations fulfill these requirements, individuals with disabilities participate actively in the construction of their life position important. When you say social pedagogical dictionaries compatibility by men active in social adaptation to the conditions of the social environment is arguably socially accepted norms, values, manners push style represents the full development of the meaning. According to I. v. Mardaxayevning⁴social adaptation of the person adapted to the conditions of the social environment active arguably, as a result, and to show itself in

the society adopted the goals, values, norms and behavior of the natural suction to take to create the conditions for it. Non-profit organizations and other institutions of civil society to establish a democratic state in society, strengthening the rule of law and the country's socio-political and socio-economic capacity plays an important role in the way. On march 3 the year 2021 “non-profit organizations by the state support of their activities to the freedom, rights and protect the legitimate interests to ensure that additional measures on⁵ the president's decision-making as active participants and partners in the implementation of electoral reforms in the country non-governmental organizations to enhance the role of their rights and the protection of legitimate interests to strengthen and expand the scope of government support plays an important role in creating favorable conditions to them.

the nature and the level of coverage conducted by public policy in our country, and that individuals who act in which families who have children with disabilities for employees and their social actions available in the truth of social change in thinking, understand appears. Research results has shown that disabled children, disabled children, social status of the family and the lifestyle associated with the presence of the problem of the basic identities of the general area. Another factor is that this family is the object of the state and society of the institute of social policy. Analysis of these factors, such community or a group of families who will unify how to structure social relations in the community use means any direct, that is how the forms of their social practice, in particular how would repeat a certain type of families ijtimoiylik I can understand that. Studying these factors I have tried to show the social image of this team. The value of the person-regulatory relations, social status (occupation, income, financial status, education level), family and marital status, family structure and parents in the process of empirical analysis of the age of three we have we adapted to identify the type of. disabled children, the family, the potential of high, medium and low. Social stratification can be the basis for making such ratsionalizatsiya of the policy of the state. The potential of family resources and the government of uzbekistan ministry is not the same as modern markazsizlashtirishga a high level of decision-making in the implementation of regional policy and local government committed to freedom in the selection of priority goals based methods and tools to achieve them, the
